Maybe your neighbor knows that mowing high means a healthier, greener lawn.

A healthier lawn with less work? It’s true!

- The ideal height for grass is three inches. Taller grass has deeper, healthier roots that can reach deeper into the soil for water. Taller grass can also shade out weeds.

- Only cut 1/3 of the blade each time you mow and leave your grass clippings on the lawn. They’re the ideal fertilizer; packed with essential nutrients.

- Grass clippings can also help hold in ground moisture, so you don’t have to water as often! Plus, they provide organic matter, which reduces soil compaction.

Less work, less watering . . .
what to do with all that free time?
Invite your neighbor over!
